

AMENDMENTS TO THE SPECIFICATION

Amend paragraph 36 as set forth below.

[0036] After step 114B, or after step 110 if no work is required based on the resource capacity determination, then in step 116 additional resource access control measures are performed, if appropriate for the requested resource. Thus, step 116 may involve using a role-based access control system to determine whether the user should be granted access to the resource. Step 116 is optional, and may be omitted in certain embodiments. Step 116 is shown simply to illustrate that a particular ~~may~~ resource may implement additional access controls or authorization checks if desired.
